

Installation of FishEye

Installation of FishEye

Steps to install FishEye

Install Java

Install MySQLInstall Jira

To install above packages follow the Jira doc

Download & copy the fisheye bin file to the Ubuntu machine from the given link

<https://www.atlassian.com/software/fisheye/download>

Change the ownership of the file and run below commands to install it. Use a third-party unzip program like 7-Zip or Winzip. Extract the downloaded file to an install location.

`unzip fisheye.zip`

Folder names in the path to your Fisheye executable should not have spaces in them. The path to the extracted directory is referred to as the <FishEye install directory> in these instructions.

`/opt/atlassian/fisheye/`

Refer the link given below :

<https://confluence.atlassian.com/fisheye/installing-fisheye-on-linux-and-mac-960155263.html>

Change the java properties and restart the fisheye service.

```
echo "FISHEYE_INST=/opt/atlassian/fisheye" | sudo tee -a /etc/environment
```

```
source /etc/environment
```

```
echo $FISHEYE_INST
```

```
sudo service fisheye restart
```

```
sudo service fisheye status
```
